WE NEED YOUR HELP URGENTLY

Leanna and Bethany scratch and claw everyday just to stay alive.

Leanna, has been on and off a gastric feeding tube for the past 3 years, at the very moment Leanna walks a very tight line in knowing she could soon very well have the nasal tube back in if things don't improve in her health and to keep her alive.

DEEP BRAIN STIMULATION (DBS) helps our two daughters stay alive and breathing. *(Please see next page)*

Leanna and Bethany are the only human beings in this world with their personal medical symptoms.

Medical Specialists here in Australia, London, France and the U.S who we have personally seen a number of times, cannot help Leanna and Bethany much more.

We launched this **URGENT FUNDRAISING APPEAL** to help raise vital monetary funds to have further, sometimes urgent, medical treatment here in Australia and to buy a suitable home for their unique disabilities etc.

(For further information on the girls condition and some medical reports please read folder)
